

DOC-Q-ROUTE

Make sure your printing takes the most cost-effective route

- Direct every printout to the most appropriate device
- Control costs – especially for colour and long-run print jobs
- Increase productivity – automatically bypass off-line devices

doc-Q-route brings new levels of efficiency to your business printing. It gives IT Administrators complete control over printing costs by routing users' documents to the most appropriate device. Where they are sent depends on rules relating to cost or convenience, such as colour, number of copies, length of print job or user privileges. doc-Q-route even lets you define these rules to meet your specific business requirements. Additionally, doc-Q-route enhances productivity by automatically bypassing devices that are off-line due to 'out-of-paper' or 'out-of-toner' status and re-routes them to the next appropriate device.

Nashuatec's unique approach, links people with knowledge and expertise, combining our wide experience of innovative, document related Products and Software Solutions with our world class Business and Professional Services to deliver the best Total Document Solutions for your business.

TOTAL DOCUMENT SOLUTIONS

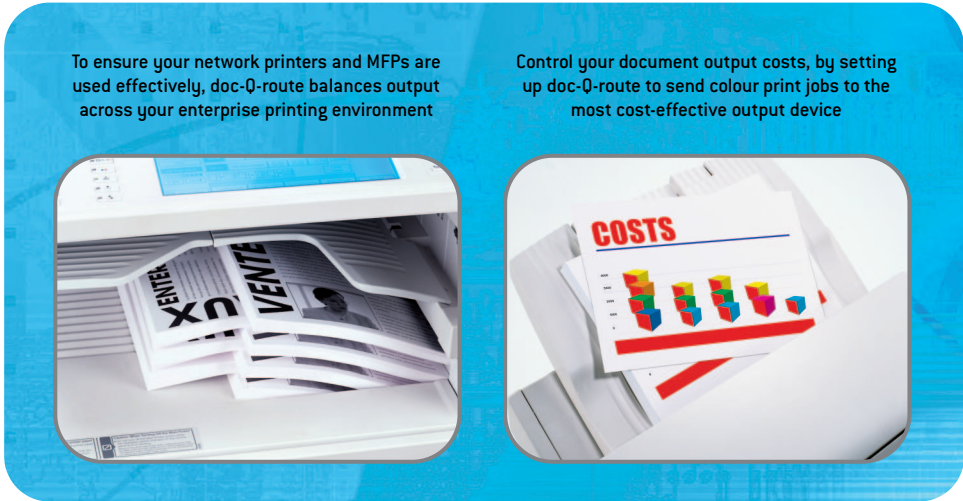

Reduce costs with doc-Q-route

doc-Q-route's simple interface allows you to define a set of rules that ensure documents are sent to the most cost-effective or convenient destination. For example, you can control costs by preventing users sending jobs over 30 pages to traditionally expensive desktop printers. Re-routing these jobs to faster network printers or multifunctional products (MFPs) reduces cost-per-page, as well as increasing productivity.

Maximize convenience

If printouts are re-routed, doc-Q-route informs users by email notification or 'pop up' message of where their document has been sent and why. The software's in-built flexibility even allows you to customize the information the user receives. As a result, you can set up a responsive print environment that provides users with detailed information on the status of their print job. This convenient method of communication, not only enhances productivity, but also relieves pressure on IT support.

To ensure your network printers and MFPs are used effectively, doc-Q-route balances output across your enterprise printing environment

Control your document output costs, by setting up doc-Q-route to send colour print jobs to the most cost-effective output device

Optimize your printing network

Easy to install and configure, doc-Q-route will control, manage and deliver an optimized network printing environment for your business. That's how doc-Q-route plays a key role in developing and implementing your overall document output strategy.

Enjoy seamless enterprise print management

With doc-Q-route, you have the vital document link between the office and Central Reprographics Department. Through a job-ticketing module, doc-Q-route integrates with doc-Q-manager software. This results in the seamless management of both centralised and distributed output resources.

Used as an integral part of your overall document output strategy, doc-Q-route is key to reducing costs and improving efficiency in your business printing environment. doc-Q-route is just one in a range of document solutions designed to put the power of document output control at your fingertips.
